

### GL-TURBO Shines at 2017 WEFTEC

10/5/2017 – Chicago – Yesterday, the 90th Water Environment Federation's Annual Technical Exhibition and Conference (WEFTEC), at McCormick Place, Chicago, came to an end. From October 2nd to October 4th, GL-TURBO Houston/Lone Star Blower presented a successful exhibition.

This year, we met numerous people from diverse backgrounds. We welcomed engineers from top engineering construction and consulting firms, owners and operators from municipal WWTPs and from 17 other countries (e.g., Pakistan, Philippines, Japan, Ecuador, Brazil, etc.), as well as distributors from all over the world. GL-TURBO has quickly become a compelling brand and one of the industry's leader in providing efficient and reliable engineered solutions, with major global engineering contractors putting us on their approved vendor lists.

[A study group visited our booth after a wastewater seminar.]

In addition to the GL-TURBO high-speed single-stage centrifugal blower cutaway and LS-series multistage turbo blower cutaway, we showcased a GL5 (Pressure Range 20-200 kPag/5-30 PSI, Power Range 132 -370 kw/175-500 hp) single-stage centrifugal blower package at our booth. The packaged system includes motor, lubrication system, cooling system, local control panel, inlet air filter, instrumentation, as well as the main blower.
